AEM 2 series V 1.17 and V 1.17+Dynoshift ECU

Release 1.02

This tutorial explains how to connect AEM 2 series V 1.17 and V.117 + Dynoshift ECU to AiM devices through the CAN Bus. AEM Dyno is an on-vehicle dynamometer system that allows user to see some additional channels marked as "DY" in the channels list.

1

Prerequisites

AEM 2 series V 1.17 ECU (with or without dynoshift) can communicate with AiM loggers if:

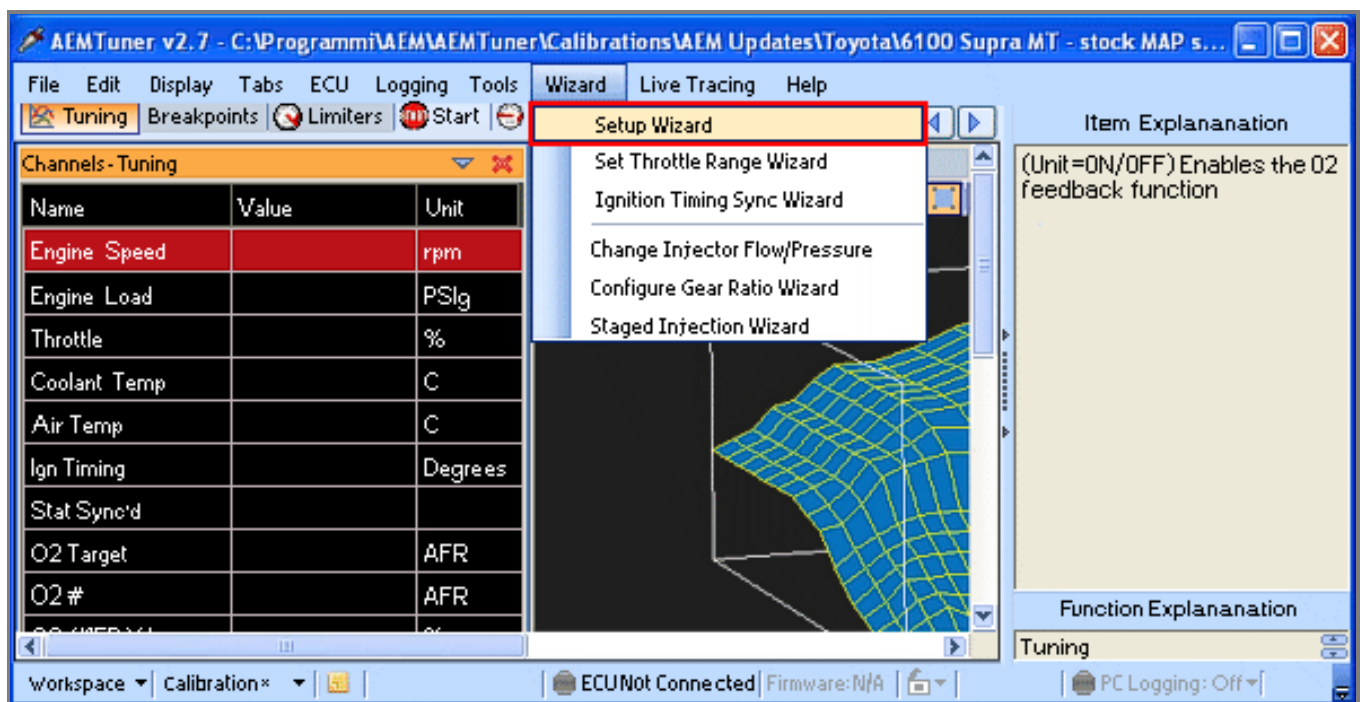

- ECU firmware version: 1.17 or higher
- AEM Tuner software version 2.7 or higher

2

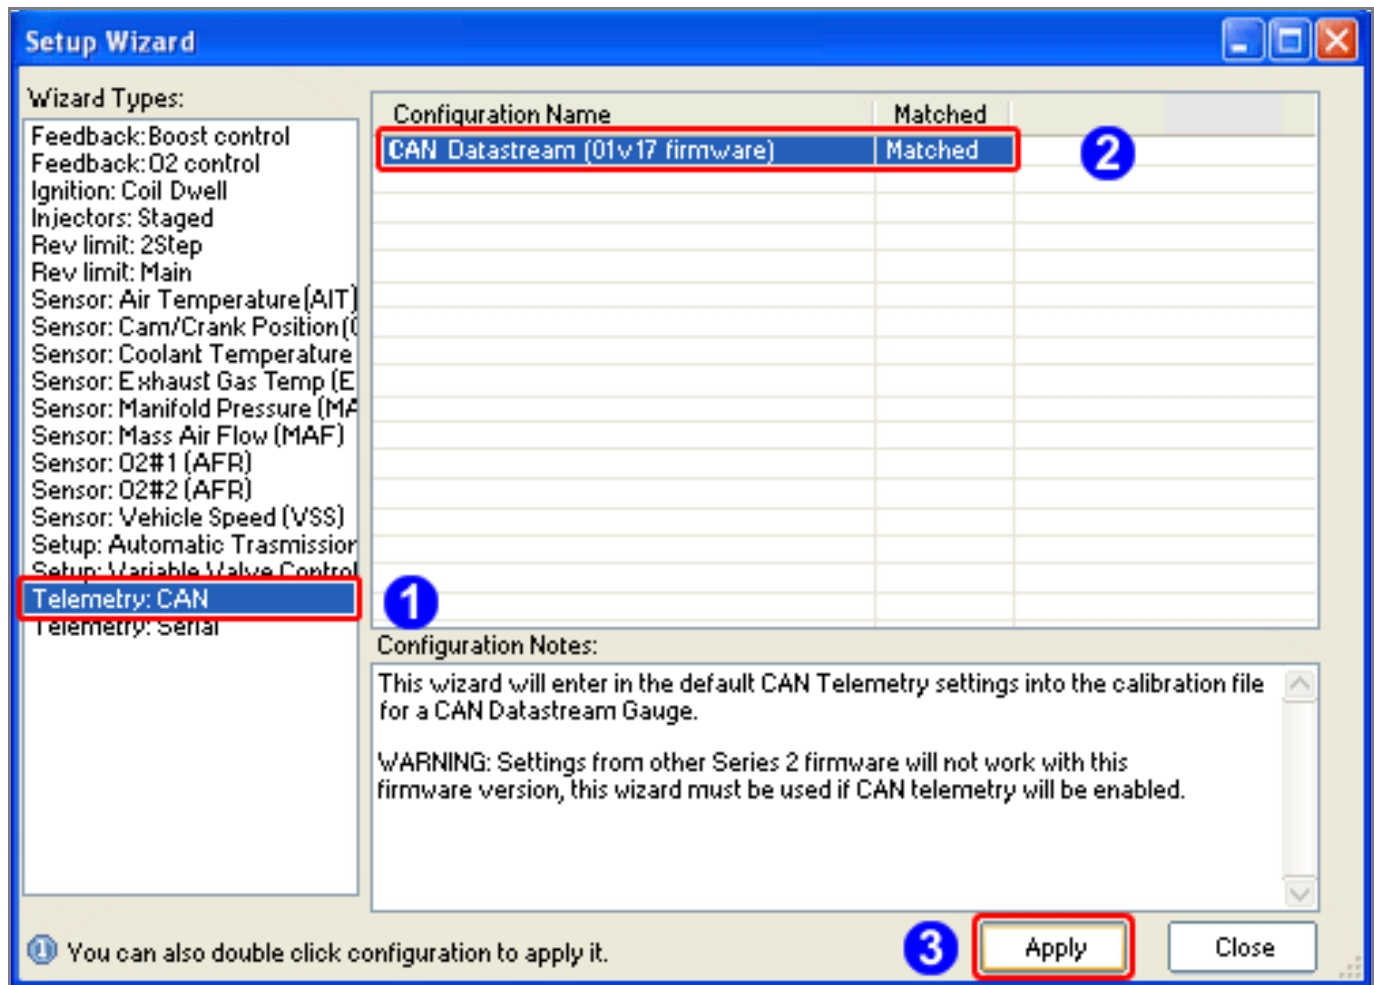

ECU Software configuration

Using AEM Tuner software – provided by AEM – follow these steps:

- run the software
- follow this path: Wizard –> Setup Wizard

- "Setup Wizard" panel appears: select "Telemetry CAN" (1);
- "Configuration name" appears (2) notifying the user that firmware version matches system requirements;
- press "Apply" (3).

3

Wiring Connection

AEM 2 Series V 1.17 ECU is equipped with 4 AMP male connectors. Starting from left: a 32 pins, a 25 pins, a 31 pins and a 16 pins connector.

The connector to be used for CAN Connection is the 31 pins. It is shown here below: please note that pins are to be numbered from right to left in each row.

ECU Pin	Pin Function	AIM Cable
25	CAN+	CAN+
26	CAN-	CAN-

4

AIM device configuration

Before connecting the ECU to AiM device, set this up using AiM Race Studio software. Parameters to select in the device configuration are:

- ECU manufacturer "AEM"
- ECU Model "EMS V1.17 CAN+Dynoshift";

5

Available channels

Channels received by AIM loggers connected to "AEM" "EMS V1.17 CAN+Dynoshift" protocol are listed here below. Please note: channels from 20 to 26 marked as "DY" are only available if AEM Dynoshift is connected. Otherwise these channels will be shown as in error.

ID	CHANNEL NAME	FUNCTION
ECU_1	EMS_RPM	RPM
ECU_2	EMS_ENG_LOAD	Engine Load
ECU_3	EMS_TPS	Throttle position sensor
