Frequently asked questions

LED bar settings

Configuring

LED bar settings

Question:

How can I configure my MyChron5 LED bar?

Answer:

The five central LEDs of MyChron5 are indication LEDs. They are custom configurable following this procedure.

- Press "MENU" -> "System Settings" -> "LED Setup" -> "LED Bar"; use "PREV"/"NEXT" buttons to scroll options and "ENTER" one to enter a menu

From "LED Setup" page press "ENTER" to enter "LED Bar" page; available options are: "Laptime", "RPM" and "OFF"; use "CHANGE" button to scroll options.

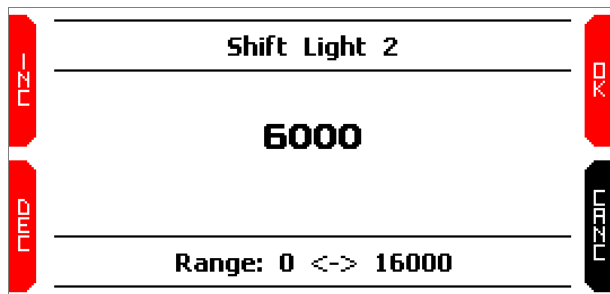

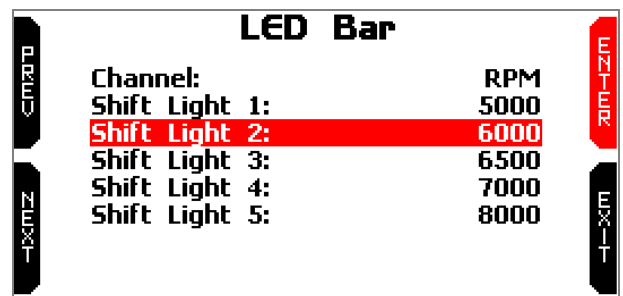

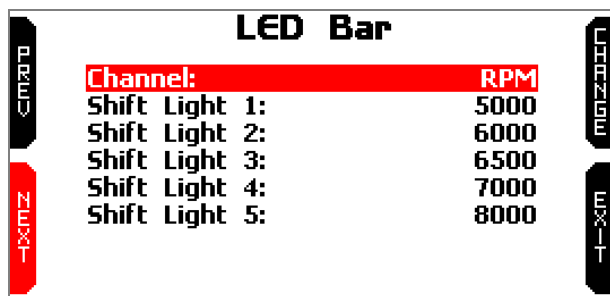

- **Laptime:** the LEDs switches on while running showing:
 - gap between current split time and this split time in best lap (Best Section)
 - gap between current lap time and best lap time (Predictive)

Each of the five LEDs indicates one tenth of second of gap; if lighting green they indicate an improvement of current lap compared to best lap of this session, while lighting red they indicate a worsening.

Configuring

- **RPM:** it is possible to set the RPM threshold value (from 0 to 16.000) that switches the LED on and the LED colour so to know when shifting.
 - select the LED to set (in the example "Shift Light 2")
 - press "ENTER"
 - set threshold value using "INC"/"DEC" buttons and press OK
 - set LED colour using "CHANGE" button to select the colour you prefer and press "OK"

- **OFF:** disables the LED bar.
