## Showing second temperature on MyChron5

---

**Question:**

I would like to see a second temperature channel (for example, EGT) on my MyChron5 display.

**Answer:**

A MyChron Expansion module (**X08MYEXUCS**) is needed. It manages analog inputs like water temperature, throttle, brake, steering angle and power valve position, brake pressure and axle speed.

Sometimes DataHub is used but it doesn't manage analog inputs so this is not the solution.
