PRODUCT DOCUMENTATION

Power your MyChron5 in three different ways

MyChron5 comes with a lithium battery lasting more than ten hours, which can be charged at home exactly like a mobile, or on track using the box socket: in the latter case you don't need to remove it from the gauge. If you like, you can also power MyChron5 connecting it to your kart battery.

Charging the lithium battery

At home, using the charger included in the kit.

X80M5KCBUSB1E EU
X80M5KCBUSB1U USA
X80M5KCBUSB1G UK
X80M5KCBUSB1A AUS

On track, using the proper charger*: in this case, you do not need to remove it from the gauge.

*Optional

X06A12VBME EU
X06A12VBMU USA
X06A12VBMG UK
X06A12VBMA AUS

Directly from your kart battery

Just use the external power cable*. The lithium battery - not being used - can be removed: in this case the aluminum cover* is to be applied to protect the power connectors.

*Optional

V02557020
